

Thinking ahead since 1936

FIREMAN TOOLS

DE-FLOODING DEVICES

While electrically driven pumps are at risk of short-circuiting during a de-flooding operation and petrol-driven pumps produce combustion gases that can be deadly in enclosed spaces, water-driven pumps enable their operator to carry out a difficult de-flooding operation without having to worry about their own safety. Made by POK in France, they feature a built-in strainer and are operated by using three lay-flat fire hoses: the first hose drives the pump using water from the fire truck, the second hose recycles the water back to the fire truck, while the third hose leads the pumped water out of the flooded area.

SMOKE EXTRACTION FANS

Smoke extraction fans are manufactured by POK in accordance with the French standard NF S 61-707. By connecting a fire hose to the fan inlet, we achieve extensive smoke extraction from flaming buildings, significantly improving the visibility of firefighters that put their lives at risk. Lightweight, robust and easy to use, they can be delivered with the couplings of your choice. The water that drives the fan can be recycled back to the vehicle, saving the available water in the vehicle. POK fans are also available in petrol and diesel powered versions.

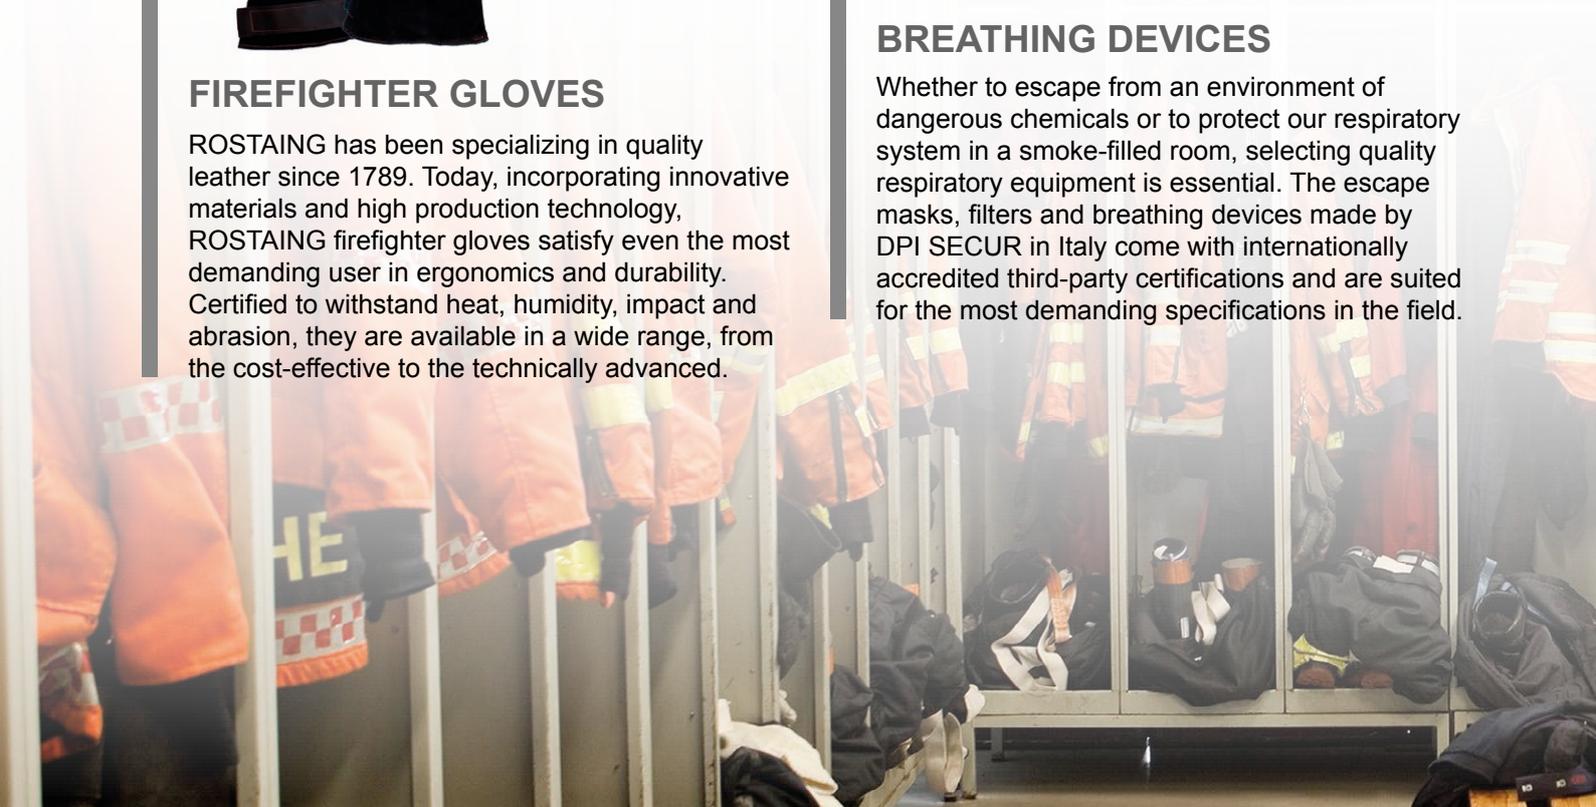

FIREFIGHTER GLOVES

ROSTAING has been specializing in quality leather since 1789. Today, incorporating innovative materials and high production technology, ROSTAING firefighter gloves satisfy even the most demanding user in ergonomics and durability. Certified to withstand heat, humidity, impact and abrasion, they are available in a wide range, from the cost-effective to the technically advanced.

BREATHING DEVICES

Whether to escape from an environment of dangerous chemicals or to protect our respiratory system in a smoke-filled room, selecting quality respiratory equipment is essential. The escape masks, filters and breathing devices made by DPI SECUR in Italy come with internationally accredited third-party certifications and are suited for the most demanding specifications in the field.

FLOWMETERS

The electronic flowmeters by POK France measure the flow, pressure and total volume of water that passes through an installation. They are an indispensable tool for depicting the actual performance of a firefighting network because, as is often the case, the actual data of a firefighting network is different from its original design, due to poor maintenance or low-performance components. Made of hard anodized aluminum and high-density polymer, POK electronic flowmeters are available in sizes ranging from DN40 to DN150.

FIRE HOSE TOOLS

Fire hoses require binding, carrying, repair, washing. As the most vulnerable part of a firefighting installation, they require comprehensive care. See below the related POK products, made in France:

- Hose binding units.
- Hose bridges, enabling vehicles to pass above them.
- Hose carrying handles.
- Hose carrying baskets.
- Hose stranglers, enabling flow cut-off.
- Hose leak sealing straps.
- Hose washing units.

FIREFIGHTER WRENCHES

Opening elevator doors, connecting hose couplings, operating hydrants, cutting safety belts, opening doors, are all done quickly and easily using the following products of POK:

- Multi-purpose firefighter tools.
- Coupling wrenches.
- Hydrant wrenches.

FIREFIGHTER BELTS & ROPES

HABERKORN's Austrian products equip firefighters in all parts of the world, ensuring their safety. Certified for the most difficult conditions, they will be your loyal partner for life. See the HABERKORN range below:

- Firefighter belts.
- Descending hooks and straps.
- Firefighter ropes.
- Rope carrying bags.
- Rescue stretchers.
- Airbag anti-deployment kits.

Thinking ahead since 1936

Pronoia / 'prɔ.ni.a/ noun < pro + nous < foresight, anticipation, provision, prudence.

With more than 80 years' tradition in the quality fire protection sector, PRONOIA maintains the mentality of a youthful company at the cutting edge of technological evolution, whilst taking an agile approach to dealing with the challenges of the world market. PRONOIA is active in the following sectors: Maritime, Industrial, Oil & Gas, Food & Beverage, Mining, Transportation, Construction, Fire Brigade, Civil Protection and Armed Forces. With accumulated knowledge, experience and a friendly approach, we advise, research and implement fire protection projects in all sizes of business, from a small restaurant to the Public Power Corporation, Aluminium of Greece, Hellenic Petroleum and Motor Oil. At PRONOIA, we achieve this wide range of operational activity because we represent the top manufacturers in the world in firefighting and personal protection equipment.

PRONOIA. We think ahead, so that you are safe.
